Bangalore, India | +91 7676416123 | suraj.dp412@gmail.com | LinkedIn: [suraj-dp-2a91441bb](#)

PROFESSIONAL SUMMARY

Automation-focused QA professional with 4+ years of experience in enterprise healthcare applications, combining functional testing, regression testing, integration validation, API/data validation, test automation, defect analysis, and stakeholder coordination. Hands-on experience with Eggplant automation and exposure to Selenium/Java, Tosca and Worksoft, with strong SQL and Postman knowledge. Experienced in designing test scenarios, validating end-user workflows, supporting automation initiatives across global clients, analyzing failures and root causes, and improving release quality and testing efficiency in Agile environments.

AUTOMATION & TEST ENGINEERING SKILLS

- | | |
|---|---|
| • Test Automation & Automation Readiness | • Eggplant Automation |
| • Selenium WebDriver / Java | • Tosca & Worksoft Exposure |
| • Functional & Regression Testing | • Integration & End-to-End Testing |
| • API Testing & Postman | • SQL & Data Validation |
| • Test Case & Test Scenario Design | • Defect Management & Root Cause Analysis |
| • Regression Suite Optimization | • Test Execution & Validation |
| • UAT & End-User Workflow Testing | • Impact Analysis |
| • JIRA & Azure DevOps | • Agile / Scrum / SDLC |
| • Healthcare EMR / Cerner / Oracle Health | • CI/CD & Git/GitHub Exposure |

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Tech Mahindra | Apr 2026 – Present

- Owned end-to-end QA activities for healthcare application builds, including test planning, test scenario design, functional validation, regression testing, integration testing, defect management, and release readiness.
- Worked with business users and technical teams to understand end-user workflows and convert functional requirements into executable test scenarios and validation coverage.
- Configured and validated new builds in FirstNet, MPages, and laboratory solutions for the Ascension client, interacting with end users to validate configuration and workflows.
- Supported automation initiatives by identifying repetitive and high-value manual scenarios suitable for automation, preparing automation-ready test coverage, executing automated workflows, and analyzing failures.
- Collaborated with technical and business stakeholders to investigate defects, perform root-cause analysis, assess business impact, and coordinate resolution through JIRA/Azure DevOps.
- Validated system integrations and data consistency across healthcare modules and workflows, using API/data validation approaches and SQL where applicable.
- Supported regression strategy and release validation, helping improve test coverage, reduce escaped defects, and maintain system stability across iterative releases.
- Participated in Agile ceremonies and worked across cross-functional teams to support requirements clarification, development validation, defect resolution, and production readiness.

Senior Quality Analyst | Oracle Health (Cerner Corporation) | Oct 2022 – Apr 2026

- Executed end-to-end functional, regression, integration, and user-workflow testing across Oracle Health/Cerner enterprise healthcare applications.
- Performed end-user workflow testing using Eggplant, validating role-based workflows and JSON data and supporting repeatable automated execution.
- Led and supported automation initiatives across multiple clients and solutions, including local and cloud environments, improving testing efficiency and reducing manual effort.
- Designed, maintained, and executed test cases and test scenarios; mapped validation coverage to application workflows and upgrade requirements.

- Validated integrations across multiple healthcare modules, ensuring accurate data flow, system consistency, and expected downstream behavior.
- Performed impact analysis for application upgrades and changes to identify affected workflows, regression scope, dependencies, and production risks.
- Took ownership of the Blood Bank Transfusion solution during critical upgrade phases, coordinating validation and supporting smooth delivery with zero major production issues reported in the existing resume.
- Used JIRA and Azure DevOps for defect tracking, test evidence, issue lifecycle management, and coordination with technical teams.
- Used BMC AppSight and other diagnostic/tooling support to assist troubleshooting and root-cause analysis.
- Collaborated with global stakeholders across Australia, Qatar/Kuwait, UK and Ireland, improving issue-resolution turnaround through structured defect analysis and communication.
- Participated in Agile ceremonies including sprint planning, stand-ups, retrospectives, and delivery discussions; supported continuous improvement and automation-readiness activities.

KEY ACHIEVEMENTS & RECOGNITION

- **SPOT Award (2026):** recognized for automation leadership across UCMS and non-UCMS clients, including the UK region; contributed to testing efficiency, critical Blood Bank delivery, knowledge sharing, and automation training.
- **UC Excellence Award – Q3 2026:** recognized for delivery impact across Emergency Medicine, Oncology, and Blood Bank; led automation execution across multiple systems and clients, provided Eggplant/BMC AppSight tooling support, and contributed to innovation activities.
- Improved testing efficiency by approximately 20% through automation initiatives and reduced manual effort across multiple client engagements.
- Reduced post-release defects by approximately 30% through stronger regression testing and validation strategies.
- Improved issue-resolution turnaround by approximately 25% through structured defect analysis, root-cause investigation, and global stakeholder coordination.
- Mentored team members and supported knowledge-sharing/training activities in automation, SQL, troubleshooting, and problem-solving.

TECHNICAL TOOLSET & DOMAIN

- | | | |
|-----------------|----------------|----------------|
| • Eggplant | • Postman | • BMC AppSight |
| • Selenium/Java | • SQL | • Git/GitHub |
| • TOSCA | • JIRA | • Maven |
| • Worksoft | • Azure DevOps | |

EDUCATION

B.E., Electronics & Communication Engineering | Bangalore Institute of Technology | CGPA: 8.3 | 2022

ADDITIONAL VALUE

- Strong healthcare-domain expertise across EMR workflows, Emergency Medicine, Oncology, Blood Bank/Transfusion, system upgrades, and enterprise integrations.
- Experienced working with global clients and distributed cross-functional teams, balancing automation, functional quality, delivery timelines, and production risk.
- Strong foundation for automation-focused roles requiring both technical testing capability and understanding of complex business workflows.
