PROFESSIONAL SUMMARY

Business Analyst and Healthcare IT professional with 4+ years of experience spanning business requirements, process analysis, solution delivery, QA, and enterprise healthcare systems. Experienced in partnering with business and clinical stakeholders, translating business needs into functional requirements and workflows, performing current-state/future-state and gap analysis, coordinating UAT, managing defects and changes, and supporting end-to-end implementation. Proven ability to act as a bridge between business, technical, and delivery teams across global clients, with a strong focus on process improvement, stakeholder alignment, documentation, operational readiness, and technology-enabled solutions.

CORE COMPETENCIES

- | | |
|---|---|
| • Business Requirements & Requirements Management | • Functional & Non-Functional Requirements |
| • Stakeholder Management & Workshop Facilitation | • Current-State / Future-State Analysis |
| • Gap Analysis & Process Improvement | • Process Mapping & Workflow Analysis |
| • User Stories, Use Cases & Acceptance Criteria | • Solution Evaluation & Functional Specifications |
| • UAT & Functional Validation | • Defect, Issue & Root Cause Analysis |
| • Change Impact & Dependency Analysis | • Agile / Scrum & Hybrid Delivery |
| • Project Coordination & Delivery Governance | • Business Process & Solution Documentation |
| • Training, Change Adoption & User Enablement | • Healthcare IT / EMR / Clinical Workflows |

PROFESSIONAL EXPERIENCE

Senior Business Analyst | Tech Mahindra | Apr 2026 – Present

- Lead requirements-gathering activities with business stakeholders, process owners, end users, and technology teams to understand business objectives, operational processes, pain points, dependencies, and system requirements.
- Analyze and document business, functional, and non-functional requirements; prioritize requirements, validate stakeholder expectations, and maintain traceability throughout the project lifecycle.
- Conduct current-state and future-state gap analysis to identify process inefficiencies, functional gaps, dependencies, system limitations, and opportunities for technology-enabled improvement and automation.
- Translate business needs into functional specifications, user stories, acceptance criteria, use cases, process flows, workflows, and other delivery-ready requirements artifacts.
- Serve as a primary coordination point between business stakeholders, software/development teams, technical teams, and project management, resolving functional questions and maintaining alignment through delivery.
- Evaluate proposed solutions against business objectives, process requirements, system capabilities, technical feasibility, operational impact, risks, and stakeholder expectations; contribute to solution and design discussions.
- Facilitate stakeholder meetings, requirement workshops, walkthroughs, and solution discussions to elicit requirements, resolve ambiguity, manage expectations, and achieve agreement.
- Support project planning and governance through scope definition, requirement tracking, prioritization, dependency management, risk and issue tracking, change management, and delivery coordination.
- Coordinate UAT and functional validation by preparing test scenarios and acceptance criteria, validating system behavior against approved requirements, documenting defects, and coordinating resolution with delivery teams.
- Assess change requests and enhancements for business impact, dependencies, risks, and downstream implications; communicate recommendations to relevant stakeholders.
- Prepare and maintain requirements specifications, functional documentation, process maps, workflows, solution documentation, test scenarios, issue logs, and traceability artifacts.
- Support end-user adoption by explaining new functionality and revised workflows, delivering training, and assisting users through implementation and transition.

Senior Associate Delivery Consultant / Senior Delivery Consultant (QA) | Oracle Health (Cerner Corporation) | Oct 2022 – Apr 2026

- Conducted requirements gathering and analysis with clients and healthcare stakeholders to understand business processes, clinical workflows, operational needs, system requirements, and expected outcomes.
- Translated business and clinical requirements into functional specifications, solution requirements, workflows, and configuration documentation for Oracle Cerner healthcare applications.
- Performed gap analysis between existing client processes and proposed software solutions, identifying functional gaps, inefficiencies, process limitations, and optimization opportunities.
- Analyzed business and clinical workflows to identify bottlenecks, system limitations, process improvement opportunities, and candidates for workflow automation.
- Acted as a key liaison between clients, business/clinical users, solution consultants, technical teams, and delivery stakeholders, coordinating requirements and issue resolution.
- Supported solution design, configuration, implementation, testing, and delivery by converting requirements into actionable functional and technical requirements.
- Prepared and maintained functional specifications, workflow/configuration documentation, implementation artifacts, test scenarios, issue logs, and project documentation.
- Participated in solution and design reviews, assessing feasibility, dependencies, risks, business impact, and implications of proposed application changes and enhancements.
- Coordinated UAT and functional validation by developing test scenarios, validating system behavior against requirements, documenting defects, and working with technical teams on resolution.
- Supported project delivery through requirement tracking, milestone coordination, risk and issue management, change activities, and implementation readiness.
- Communicated functional changes, software developments, and implementation updates to stakeholders and supported end users with training and user guidance.
- Provided post-implementation support by analyzing reported issues, assessing workflow impact, coordinating resolution, and recommending appropriate solution or process improvements.

ACHIEVEMENTS & RECOGNITION

- **SPOT Award (2026):** Recognized for automation leadership across UCMS and non-UCMS clients, including the UK region; contributed to testing efficiency, knowledge sharing, and critical Blood Bank delivery.
- **UC Excellence Award – Q3 2026:** Recognized for value delivered across Emergency Medicine, Oncology, and Blood Bank solutions; led automation execution, tooling support, training, and innovation activities.
- Reduced post-release defects by approximately 30% through improved regression testing strategies and stronger impact-focused validation.
- Improved automation efficiency by approximately 20% across multiple client engagements and reduced manual testing effort.
- Improved issue-resolution turnaround by approximately 25% through structured stakeholder coordination and root-cause analysis.

TECHNOLOGY & DOMAIN

Technical: JIRA, Azure DevOps, Eggplant, BMC AppSight, Tosca, Worksoft, Postman, SQL, Selenium/Java, Git/GitHub, Maven.
Healthcare: Oracle Health/Cerner, EMR workflows, Emergency Medicine, Oncology, Blood Bank Transfusion, Lab Solutions, MPages.

Delivery: Agile/Scrum, UAT, defect management, requirements traceability.

ADDITIONAL PROFESSIONAL STRENGTHS

- Global client and cross-functional experience across Australia, Qatar/Kuwait, UK and Ireland; comfortable working with distributed business, clinical, technical, and delivery teams.
- Strong combination of business analysis, healthcare domain knowledge, software delivery, QA/UAT, process improvement, and stakeholder communication.
- Experienced in translating complex operational and clinical workflows into clear requirements, validation scenarios, and implementation-ready documentation.
